# HD-ONE

SINGLE UTP 1080P HDMI AUDIO & VIDEO EXTENSION

## INTRODUCING MAGENTA'S HD-ONE

Traditional HDMI over UTP products require a pair of CatX cables (typically with at least one shielded cable required) in order to remotely send video, audio and HDCP signals from a transmitter to a receiver.

Now, Magenta Research offers a single cable HDMI extension solution! HD-One passes 1080p resolution video, audio and HDCP signals to 150 feet/46 meters and 1080i/720p to 200 feet/61 meters, all on one Cat6 cable.

HD-One's distance reach and use of inexpensive, easy to terminate UTP cable, make this product an obvious choice for HDMI extension whether it's a Blu-Ray player, a cable/set-top box or a PC with an HDMI output. Such distances are virtually impossible to replicate using specially constructed HDMI cables, which, even at short distances, deteriorate image quality, are extremely difficult to terminate in the field and carry a high cost factor.

- ▶ 1080p at 150ft/46m
- ▶ HDMI distribution over one UTP Cable
- ▶ Molded tabs for easy installation
- ▶ Power required on transmitter only
